

Pacetrace Live Cable Detector P700

Live cable locators can only find electrical cables that have a current flowing through them to a depth & radius of 5 metres. They will not locate cable through which no power is being drawn.

It is fast, accurate and easy to use.

The Pacetrace is a live energised cable detector, which can also give an indication of cable depth. It can save you time and money by avoiding unnecessary excavation.

Specifications

Frequency	50 Hz and 60 Hz (third harmonic)
Sensitivity	4mA/m (5nWb/m ²)
Dimensions	960mm x 100mm x 75mm
Weight	1.27 kg
Warranty	1 year

Features

Saves Excavation Time

The Pacetrace Live Cable Detector is used to find live current-carrying cables, **their direction and their depth, down to five meters.**

Competitively Priced

The Pacetrace is designed without any unnecessary extras that can easily malfunction and add to the cost of the instrument.

In Heavy Traffic

Head phones can be plugged into the Control Box

Clear Audio Signal

A single peak in the signal makes it easy to accurately locate the live cable and determine its orientation.

Designed with the Needs of the Operator in Mind.

A lightweight and rugged live cable detector. One control knob for all functions, clear analogue meter to help estimate cable depth.

Other Pacetrace features:

- Current carrying cables can be within a radius of 5 metres
- Designed for the operator, lightweight, portable and robust
- Meter indicates signal strength, estimated cable depth and battery state
- Clear audio signal indicates cable position and orientation
- Battery holder is easily accessible but shielded from weather
- Single control knob for ease of use and single handed control
- Audio signal plus headphone socket - can be easily heard in noisy site or traffic conditions
- Enamelled steel control box
- Instruction printed on control box
- Single PP3 9 volt battery
