

elcometer® 3505 Cube Film Applicators

Made of hardened stainless steel with a bevelled flat-edged blade, these applicators apply films 12mm wide. Generally on any flat and firm surface and especially on glass for evaluation of drying time.

A set of five reservoirs to apply 5 stripes of film at the same time is also available. Ideal for simultaneously studying several different products. The film spacing matches the gliders of the drying time system of the **Elcometer 4341 Motorised Film Applicators**.

Supplied with a set of nineteen gauges either from 30 to 1000µm or 1 to 40mils to adjust the gap of the spreader blade.
