

Handitally Electronic hand tally counter

3027

4 digit electronic hand tally with a large LCD (liquid crystal display) and backlight capable of counting up and down

Traditional hand tally counters have been unable to accommodate the needs of many users who need to **add and subtract counts** from a total, and who need to operate / view the counter in less than ideal conditions. The Handitally has separate buttons for **Add, Subtract, Backlight and Reset**. It is the world's first electronic hand tally with built in backlight and UP / DOWN count functionality.

The count keys provide positive feedback along with an **audible click** letting you know a count has been registered. The stylish, ergonomic case is designed to fit snugly in your hand for ease of use. The large display, bright backlight and carrying strap round out a feature set that is unmatched, and the economical price of the Handitally makes it the new choice for professionals.

Features

- Simple to operate
- Low cost
